

Inspection of Inter-Subnet traffic in AWS VPC using CloudGuard

I've been asked an interesting and, seemingly, trivial question: "How would you protect the hosts in AWS VPC located in a different subnets by inspecting traffic between them?"

I was also assured that presently, AWS did not have a solution to this problem, as every routing table you create will contain "local" route, all traffic from all subnets within one VPC will be routed through it.

To work on this puzzle, this lab environment was provisioned:

...and answer to this dilemma is to use static routes in the instances pointing to the interfaces of the vSEC or cluster, as well as security groups as Sources from the traffic to the Private Subnets:

```
[root@ip-10-255-255-200 ec2-user]# route
```

Inspection of Inter-Subnet traffic in AWS VPC using CloudGuard

Kernel IP routing table

```

Destination Gateway Genmask Flags Metric Ref Use Iface
default 10.255.255.193 0.0.0.0 UG 0 0 0 eth0
10.255.255.128 10.255.255.201 255.255.255.192 UG 0 0 0 eth0
10.255.255.192 * 255.255.255.192 U 0 0 0 eth0
169.254.169.254 * 255.255.255.255 UH 0 0 0 eth0
[root@ip-10-255-255-200 ec2-user]#

```

```
[root@ip-10-255-255-150 ec2-user]# route
```

Kernel IP routing table

```

Destination Gateway Genmask Flags Metric Ref Use Iface
default 10.255.255.129 0.0.0.0 UG 0 0 0 eth0
10.255.255.128 * 255.255.255.192 U 0 0 0 eth0
10.255.255.192 10.255.255.140 255.255.255.192 UG 0 0 0 eth0
169.254.169.254 * 255.255.255.255 UH 0 0 0 eth0
[root@ip-10-255-255-150 ec2-user]#

```

With Firewall Access rules set:

No.	Name	Source	Destination	VPN	Services & Applications	Action	Track	Install On
1	Management-to-vSEC01	Drawbridge	vSEC01	* Any	* Any	Accept	Log	vSEC01
2	Net_10.255.255.192 Web Access	Net-10.255.255.192/26	* Any	* Any	http https	Accept	Log	vSEC01
3	128 to 192	Net-10.255.255.128/26	Net-10.255.255.192/26	* Any	* Any	Accept	Log	vSEC01
4	192 to 128	Net-10.255.255.192/26	Net-10.255.255.128/26	* Any	* Any	Accept	Log	vSEC01
5	Cleanup rule	* Any	* Any	* Any	* Any	Drop	Log	vSEC01

Missing cleanup rule - Unmatched traffic will be dropped and not logged.

With NAT rules set to:

No.	Original Source	Original Destination	Original Services	Translated Source	Translated Destin...	Translated Services	Install On	Comments
1	Net-10.255.255.192/26	Net-10.255.255.128/26	* Any	= Original	= Original	= Original	* Policy Targets	
2	Net-10.255.255.128/26	Net-10.255.255.192/26	* Any	= Original	= Original	= Original	* Policy Targets	

And was able to see the packet traversing firewall (10.255.255.201 and 10.255.255.140 are its interfaces):

Inspection of Inter-Subnet traffic in AWS VPC using CloudGuard

The screenshot displays the 'Log Details' window in the AWS CloudGuard console. The main header shows a green 'Accept' status with a plus icon and the text 'ssh Traffic Accepted from 10.255.255.150 to 10.255.255.200'. Below this, there are two tabs: 'Details' and 'Matched Rules'. The 'Details' tab is active and contains several sections:

- Log Info:** Origin (vSEC01), Time (Today, 11:56:54 AM), Blade (Firewall), Product Family (Access), Type (Connection).
- Traffic:** Source (10.255.255.150), Source Port (49874), Source Zone (Internal), Destination (10.255.255.200), Destination Zone (Internal), Service (ssh (TCP/22)), Interface (eth2).
- Policy:** Action (Accept), Policy Management (SMS8010), Policy Name (MMC-Intra-VPC), Policy Date (14 Feb 18, 3:56:25 PM), Layer Name (MMC-Intra-VPC Network), Access Rule Name (128 to 192), Access Rule Number (3).
- Actions:** Report Log (Report Log to Check Point).
- More:** Id (22ebba26-0000-00c0-5a87-0d5600000000), Marker (@A@@B@1518757200@C@120927), Log Server Origin (SMS8010 (192.168.7.30)), Id Generated By In... (false), First (true), Sequencenum (1), Db Tag ({DDA309C9-743C-EB45-BB59-5DBE901D2463} [less](#)), Logid (0), Description (ssh Traffic Accepted from 10.255.255.150 to 10.255.255.200 [less](#)).

```
[root@ip-10-255-255-150 ec2-user]# ssh ec2-user@10.255.255.200
Permission denied (publickey).
[root@ip-10-255-255-150 ec2-user]#
```

And here is the tcpdump from the target host:

```
[root@ip-10-255-255-200 ec2-user]# tcpdump src 10.255.255.150
tcpdump: verbose output suppressed, use -v or -vv for full protocol decode
listening on eth0, link-type EN10MB (Ethernet), capture size 65535 bytes
```

Inspection of Inter-Subnet traffic in AWS VPC using CloudGuard

```
21:03:53.440273 IP 10.255.255.150.60118 > 10.255.255.200.ssh: Flags [S], seq 2098326363, win 26883,
options [mss 1460,sackOK,TS val 843716 ecr 0,nop,wscale 7], length 0
...
```

With this Security group assigned to both hosts in my demo, the 10.255.255.150 and 10.255.255.200:

Where sg-e2264391 is the:

```
[ec2-user@ip-10-255-255-150 ~]$ date; ssh 10.255.255.200Fri Feb 16 13:29:42 UTC 2018Permission
denied (publickey).[ec2-user@ip-10-255-255-150 ~]$ curl http://169.254.169.254/latest/meta-data/security-
groupsTempSG1[ec2-user@ip-10-255-255-150 ~]$
```

```
[ec2-user@ip-10-255-255-200 ~]$ date; ssh 10.255.255.150
```

```
Fri Feb 16 13:30:04 UTC 2018
```

```
Permission denied (publickey).
```

```
[ec2-user@ip-10-255-255-200 ~]$ curl http://169.254.169.254/latest/meta-data/security-groups
```

```
TempSG1[ec2-user@ip-10-255-255-200 ~]$
```

And if you really want to be sure that the traffic in question was traversing the firewall and NOT a default VPC router:

and

```
[root@ip-10-255-255-200 ec2-user]# ifconfig | grep eth0
eth0    Link encap:Ethernet HWaddr 02:70:96:B0:44:80
[root@ip-10-255-255-200 ec2-user]#
```

```
[root@ip-10-255-255-200 ec2-user]# tcpdump -tttt -ne host 10.255.255.150
tcpdump: verbose output suppressed, use -v or -vv for full protocol decode
listening on eth0, link-type EN10MB (Ethernet), capture size 65535 bytes
2018-02-15 16:01:28.245759 02:af:87:e2:04:c6 > 02:70:96:b0:44:80, ethertype IPv4 (0x0800), length
74: 10.255.255.150.39480 > 10.255.255.200.ssh: Flags [S], seq 3739857756, win 26883, options [mss
1460,sackOK,TS val 331468 ecr 0,nop,wscale 7], length 0
```

Inspection of Inter-Subnet traffic in AWS VPC using CloudGuard

```
2018-02-15 16:01:28.245898 02:70:96:b0:44:80 > 02:af:87:e2:04:c6, ethertype IPv4 (0x0800), length 74:

331469], length 0
```

The addition of the static routes could be either bootstrapped or included in AMIs, depending on your situation.

To verify that the instances residing in different subnets will remain isolated in the absence of the static routes, those were removed and we can see that the SSH connection attempt is timing out:

```
[ec2-user@ip-10-255-255-150 ~]$ route
Kernel IP routing table
Destination Gateway Genmask Flags Metric Ref Use Iface
default 10.255.255.129 0.0.0.0 UG 0 0 0 eth0
10.255.255.128 * 255.255.255.192 U 0 0 0 eth0
169.254.169.254 * 255.255.255.255 UH 0 0 0 eth0
[ec2-user@ip-10-255-255-150 ~]$ ssh ec2-user@10.255.255.200
ssh: connect to host 10.255.255.200 port 22: Connection timed out
[ec2-user@ip-10-255-255-150 ~]$
```

```
----
[ec2-user@ip-10-255-255-200 ~]$ route
Kernel IP routing table
Destination Gateway Genmask Flags Metric Ref Use Iface
default 10.255.255.193 0.0.0.0 UG 0 0 0 eth0
10.255.255.192 * 255.255.255.192 U 0 0 0 eth0
169.254.169.254 * 255.255.255.255 UH 0 0 0 eth0
[ec2-user@ip-10-255-255-200 ~]$ ssh ec2-user@10.255.255.150
```

Inspection of Inter-Subnet traffic in AWS VPC using CloudGuard

```
ssh: connect to host 10.255.255.150 port 22: Connection timed out
[ec2-user@ip-10-255-255-200 ~]$
```

And reinstatement of the static routes results in:

```
[root@ip-10-255-255-150 ec2-user]# nano /etc/sysconfig/network-scripts/route-eth0
[root@ip-10-255-255-150 ec2-user]# reboot
[root@ip-10-255-255-150 ec2-user]#
